SEED DISPERSAL: Mechanisms of Flight

This month we will walk the landscape and examine the different forms that winged fruit take in order to disperse their seeds far and away. By testing and observing flight patterns, we can create opportunities for students to use engineering principles to design their own mechanisms for dispersal. Join fellow educators in exploring nature and share ideas for how to use the outdoors with all students.

Saturday, Nov. 4th
9 – 11:30 am
rain or shine

Meet at the Hunnewell Building
125 Arborway
Boston, MA 02130
617 384-9032
